

JOSAM light truck set

Anchoring up to 3.5 ton vehicles in place by using our existing JOSAM frame press straightening system.

This straightening system is appropriate for those of you who already have I-beams cast in the floor and want to be able to anchor and fasten smaller vehicles like hauling vehicles and light trucks up to 3.5 tons. With four Supporting stands, anchoring holders and a universal set to fasten vehicles, you can easily and simply begin repairs.

The JOSAM floor track, which is normally used to anchor our straightening tools for heavier vehicles, is utilized to attach the four supporting stands. The I-beams, which are cast in the floor, are of the INP-200 type or the IPE-240 type. An LTS (light truck set) frame square is also available of the UNP100 beam which is specially adapted for the purpose. The vehicle is mounted on the jacking stands with the help of four attachment points. The positions for these are given in the data sheets that are included in the software programme called Car-O-Data.
